Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of the joint technical committee is to prepare International Standards. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

Amendment 3 to ISO/IEC 14496-3:2009 was prepared by Joint Technical Committee ISO/IEC JTC 1, Information technology, Subcommittee SC 29, Coding of audio, picture, multimedia and hypermedia information.

AMENDMENT 3: Transport of unified speech and audio coding (USAC)

1.2 Normative references

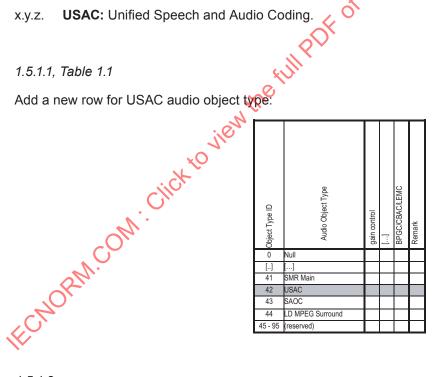

Add the following reference:

Part 3: Unified speech and audio coding ISO/IEC 23003-3, Information technology — MPEG audio technologies -

1.3 Terms and definitions

Insert the following term at the appropriate place and align numbering:

USAC: Unified Speech and Audio Coding.

1.5.1.2

Add the following subclause describing the USAC audio object type:

1.5.1.2.40 USAC object type

The USAC object type conveys Unified Speech and Audio Coding payload (see ISO/IEC 23003-3) in the MPEG-4 Audio framework.

ISO/IEC 14496-3:2009/Amd.3:2012(E)

1.5.2.1

Add the following list item:

15. The Low Delay AAC v2 Profile contains the audio object types 23 (ER AAC LD), 39 (ER AAC ELD) and 44 (LD MPEG Surround).

Table 1.3, Audio Profiles definition

Add a column with the term "Low Delay AAC v2 Profile" in the first (header) row, and an "X" in the rows with the Object Type IDs 23, 39 and 44, as follows:

Object Type ID	Object Type ID Audio Object Type Low DelayAAC v2					
			20 20,			
23	ER AAC LD		X			
			6,5.			
39	ER AAC ELD		X			
		NA.				
44	LD MPEG Surround	1,0	X			
1.5.2.3 Levels within the profiles						
Add the following paragraph:						
Levels for Low Delay AAC v2 Profile						
1.5.2.3 Levels within the profiles Add the following paragraph: Levels for Low Delay AAC v2 Profile The following levels are specified: Table AMD3.1—Levels for the Low Delay AAC v2 profile						

1.5.2.3 Levels within the profiles
